Contents of Volume 7

Number 1, May 1973

HIDEOKI HOSHINO, SHINICHI YOKOSE, AND MITSUO SHIMOJI. Ionic Conductivity of Lead Bromide Crystals 1

FRANÇOIS SIBIEUDE. Evolution de la Forme *A* des Sesquioxydes de Lanthanides par Addition D'oxyde de Thorium ThO_2 7

J. R. REA AND E. KOSTINER. The Crystal Structural of α-Copper Vanadate 17

T. TAKAHASHI AND O. YAMADA. Crystallographic and Magnetic Properties of the $Cd(OH)_2$ Layer Structure Compound TiS_2 Containing Extra Iron 25

SPERO MANOLATOS, MARTIN TILLINGER, AND BENJAMIN POST. Polymorphism in Cesium Thiocyanate 31

B. J. EVANS AND D. R. PEACOR. Thermal Expansion in $(La_{0.62}Pb_{0.38})MnO_3$: Possible Evidence for a Coupling Between Elastic and Magnetic Exchange Forces 36

B. ERDMANN AND C. KELLER. Actinide(Lanthanide)–Noble Metal Alloy Phases, Preparation and Properties 40

J. J. CAPPONI, J. CHENAVAS, ET J. C. JOUBERT, Sur de Nouveaux Borates Mixtes des Métaux de Transition Isotopes de la Warwickite 49

W. VAN GOOL. Structural Aspects of Anomalously Fast Ionic Conductivity in Solids 55

W. VAN GOOL AND P. H. BOTTELBERGHS. Domain Model for Anomalously Fast Diffusion 59

H. A. PAPAZIAN, P. J. PIZZOLATO, AND J. GLIOZZI. Stabilities of Some Silicate Minerals under Approximate Venusian Surface Conditions 66

E. TILLMANNS, W. GEBERT, AND W. H. BAUR. Computer Simulation of Crystal Structures Applied to the Solution of the Superstructure of Cubic Silicondiphosphate 69

T. NEGAS. The $SrMnO_{3-x}$-Mn_3O_4 System 85

J. G. ALLPRESS, S. IIJIMA, R. S. ROTH, AND N. C. STEPHENSON. Structural Studies by Electron Microscopy High-Resolution Observations on β-$ZrO_2 \cdot 12Nb_2O_5$ 89

S. IIJIMA AND J. G. ALLPRESS. High Resolution Electron Microscopy of $TiO_2 \cdot 7Nb_2O_5$ 94

R. K. OSTERHELD AND J. D. HAWTHORNE. Liquidus Diagram for the Sodium Orthophosphate–Lead Orthophosphate System 106

Number 2, June 1973

M. D. ROSENTHAL AND B. W. MAXFIELD. Electrical Transport Properties and Preparation of the Metal–Ammonia Compound Lithium Tetraammine 109

A. MOSSET ET Y. JEANNIN. Etude Cristallographique de l'Arsènotellurure de Zirconium Quadratique 124

G. T. POTT AND B. D. MCNICOL. Luminescence of Cr^{3+} Ions in Ordered and Disordered $LiAl_5O_8$ 132

D. Pearlman, E. Carnall, Jr., and T. W. Martin. The Preparation of Hot-Pressed Chalcogenide Spinels 138

L. H. Brixner and C. M. Foris. Crystal Growth and X-Ray Data of the Lead Phosphates $Pb_4P_2O_9$ and $Pb_8P_2O_{13}$ 149

C. Warren Haas. On the Necessity for Invoking a Free-Ion-Like Model for the Super Ionic Conductors 155

J. Guillevic, Mme. O. Bars, et D. Grandjean. Etude Structurale de Combinaisons Sulfurées et Séleniées du Molybdène. III. Structure Cristalline de $NiMo_3S_4$ 158

J. R. Rea and E. Kostiner. The Crystal Structure of $CuVO_3$(II), a High-Pressure Ilmenite Phase 163

G. Blasse. Vibrational Spectra of Yttrium Niobate and Tantalate 169

A. W. Sleight and L. H. Brixner. A New Ferroelastic Transition in Some $A_2(MO_4)_3$ Molybdates and Tungstates 172

J. Zanos Gougoutas and L. Lessinger. Solid State Chemistry of Organic Polyvalent Iodine Compounds. II. The Crystal Structure of 2-Iodo-3′-chlorodibenzoyl Peroxide 176

K. Nassau, J. W. Shiever, and B. E. Prescott. Transition Metal Iodates. I. Preparation and Characterization of the 3*d* Iodates 185

S. C. Abrahams, R. C. Sherwood, J. L. Bernstein, and K. Nassau. Transition Metal Iodates. II. Crystallographic, Magnetic, and Nonlinear Optic Survey of the 3*d* Iodates 205

R. J. D. Tilley. An Electron Microscope Study of Some Titanium Sulphides 213

Mme. Michèle Louër, Daniel Grandjean, et Dominique Weigel. Structure Cristalline et Expansion Thermique de L'Iodure de Nickel Hexahydrate 222

Y. Takeda, M. Shimada, F. Kanamaru, and M. Koizumi. Synthesis of 12-Layer Modification of Hexagonal $BaFeO_3$ Under High Oxygen Pressure 229

Pierre Besançon. Teneur en Oxygéne et Formule Exacte d'Une Famille de Composé Habituellement Appelés "Variété β" ou "Phase Compexe" des Sulfures de Terres Rares 232

P. G. Dickens, J. H. Moore, and D. J. Neild. Thermochemistry of Hydrogen Tungsten Bronze Phases H_xWO_3 241

Number 3, July 1973

J. Schoonman, G. J. Dirksen, and G. Blasse. Anisotropic Conductivity of PbFCl 245

Abdallah El Maslout, Jean-Pierre Motte, et Charles Gleitzer. Phosphures Ternaires de Lithium $Li_{2n-3}M^nP_{n-1}$ (M = Be, Cd, Sn) de Structure Antifluorine ou Dérivée 250

J. Bouwma, C. F. van Bruggen, and C. Haas. Magnetic Properties of Compounds $(Mn, Cr)_{1+x}Sb$, $V_{1+x}Sb$ and $(Mn, V)_{1+x}Sb$ with B8-type Structures 255

A. Catalano, R. J. Arnott, and A. Wold. Magnetic and Crystallographic Properties of the System $Fe_2P_{1-x}As_x$ 262

AUTHOR INDEX 477

Subject Index for Volume 7 will appear in the December issue as part of a cumulative index for the year 1973

Information for Authors

The *Journal of Solid State Chemistry* publishes manuscripts on chemical, structural, thermodynamic, electronic, magnetic and tical properties and processes in solids. Typical studies encompass crystal chemistry, phase equilibria and transformations, der–disorder phenomena, diffusion, high-temperature and high-pressure processes, crystal growth mechanisms, epitaxy, nding in solids, reactions at surfaces, statistical mechanics of defect interactions. Both theoretical and experimental papers e welcome. On occasion a critical review is sought in selected rapidly developing fields.

English, French, and German are the official languages of the Journal. Papers in Russian are acceptable, but they will be nslated into English before publication.

Manuscripts may be submitted to any one of the three editors (R. E. Hughes, Department of Chemistry, Cornell University, aca, NY 14850; M. J. Sienko, Department of Chemistry, Cornell University, Ithaca, NY 14850; A. Wold, Division of gineering, Brown University, Providence, RI 02912) or through any member of the Editorial Advisory Board.

Manuscripts should be submitted in triplicate—double-spaced on one side of 21.5 × 28 cm paper. Headings of major sections ould be typed in capital letters and centered on the page.

Each page of the manuscript should be numbered. The first page should contain the article title, author's name, and liation. At the bottom of this page should appear any footnotes to the title (indicated by superscript *, †). The second page ould contain an abstract (50–150 words) which should be suitable for use in *Chemical Abstracts*.

The American Chemical Society's *Handbook for Authors* should be followed regarding matters of style and abbreviations of its. The *Style Manual* of the American Institute of Physics is also an acceptable guide.

Tables. Tables should be numbered with Roman numerals in a sequence corresponding to the order of citation in the text. bles larger than two manuscript pages will be reproduced by photoengraving; therefore, all extended tables should be pared carefully in clear sharp type. Errors in such tables cannot be corrected in proof. Whenever appropriate, the tables ould be designed to fit the Journal page after photoreduction. Glossy prints of these extended tables are desirable. Footnotes ables are to be placed directly below the table and should be indicated by superscript, lower-case italic letters ($^{a, b, c}$).

Special Tables. In lieu of publication, it may be necessary to deposit unusually long tables with the National Auxiliary blications Service (NAPS). In particular, structure factor tables must be deposited if, in a clear, proportioned, photoreduced rmat, they would occupy more than one Journal page (this corresponds to a limit of about 1000 F_o and F_c). In any case, ee copies of all tables must be submitted with the manuscript.

For material to be deposited, a deposit fee of $12.50 for up to 60 pages of standard-size or 30 pages of oversize deposited terial is to be paid by the authors to NAPS. Appropriate transmittal forms to accompany deposited material will be pplied to the authors by the editors at the time a paper is accepted for publication.

The following footnote (wherein missing numbers are to be inserted by the author in page proof) should be used to ference deposited material:

"A table of ..... has been deposited as Document No. NAPS-..... with the ASIS National Auxiliary Publications Service, c/o Microfiche Publications, Div. of Microfiche Systems Corporation, 305 East 46 Street, New York, N. Y. 10017. A copy may be secured by citing the document number and by remitting $..... for photocopies or $..... for microfiche. Advance payment is required. Make check or money order payable to ASIS-NAPS."

Figures. Authors should send glossy prints or original black ink drawings, no larger than 21.5 × 28 cm. It is important that awings be lettered with a lettering set and planned to fit the proportion of the printed page (19 × 26.5 cm). Background grids ould not be included. The caption of each axis should be lettered parallel to its axis. Lettering on the original should be rge enough to be legible after a reduction of 50%. For half-tone reproductions, glossy, high-contrast, black and white prints ould be submitted. Each figure should be identified in a margin with the author's name and figure number. Figures are to be ed in text by consecutive Arabic numerals. Figure captions should be typed as a list on a separate page.

Equations. Equations should be typewritten or clearly handwritten, with an Arabic number if necessary for reference placed parentheses to the right of the equation. Reference to equations should use the form "Eq. (3)."

Footnotes. Footnotes to the text should be indicated by consecutive superscript numbers and listed on a separate page at the d of the article.

References. References should be cited in text by consecutive underlined numbers in parentheses. The references must appear a separate sheet, listed in numerical order—i.e., in accordance with order of citation in text. After the reference number, the thor's initials, last name, journal name, volume, initial page number, and year (in parentheses) should be listed in that order. bbreviations for journal names should follow the style of *Chemical Abstracts' Service Source Index*. For book references, give e author's name, name of book (in quotes), editor's name (if any), edition (if other than the first), chapter, or page number, blisher's name, place, and year of publication.

Proofs. Unfolioed page proofs will be sent to the author with reprint order forms. There is no page charge.

Advances in
HIGH TEMPERATURE CHEMISTRY

Edited by LEROY EYRING

Department of Chemistry
Arizona State University
Tempe, Arizona

Volume 3

CONTENTS:

R. J. THORN, Some Theoretical Significances of High Temperature Chemistry J. M. COWLEY, Short-Range Ordering in Crystals. GUY R. B. ELLIOTT, DONALD R. CONANT, BARTON L. HOUSEMAN, HAROLD S. SWOFFORD, Jr., PRESS L. ROBINSON, and CHARLES E. HOLLEY, Interpreting Liquid Alloy Activity Measurements: A Changing Scientific Paradigm. J. BERKOWITZ, Photoionization Mass Spectrometry and Photoelectron Spectroscopy of High Temperature Vapors. FRANK J. LOVAS and DAVID R. LIDE, Jr., Microwave Spectroscopy of High Temperature Gases. LINSEN HSIA NGAI and FRED E. STAFFORD, Gaseous Oxohalides, Hydroxides, and Complex Oxides of Group III and Transition Elements.

1971, 302 pp., $17.50

Volume 4

CONTENTS:

DOLPHUS E. MILLIGAN and MARILYN E. JACOX, Infrared and Ultraviolet Spectroscopic Studies of a Number of Small Free Radicals and Molecular Ions in a Matrix Environment. ROBERT F. PETERSON, Jr., and RICHARD WOLFGANG, The Elementary Reactions of Atomic Carbon. WAYNE L. WORRELL, Dissociation of Gaseous Molecules on Solids at High Temperature. GERALD L. DEPOORTER and T. C. WALLACE, Diffusion in Binary Carbides. G. A. SOMORJAI and F. J. SZALKOWSKI, Auger Spectroscopy on Surfaces. R. F. BARROW and C. COUSINS, Spectroscopic Properties of the Gaseous Diatomic Sulphides. LLOYD S. NELSON, Techniques for Studying Liquids and Solids at Extreme Temperatures. C. C. HERRICK, Automatic Data Acquisition and Its Treatment. ALLEN L. BOWMAN and GEORGE P. ARNOLD, High Temperature Neutron Diffraction Studies. **1972, 296 pp., $17.50**

Group Theory and Its Applications

Edited by ERNEST M. LOEBL
Polytechnic Institute of Brooklyn
Brooklyn, New York

VOLUME 2

This informative treatise, of which this is the second volume, narrows the gap between textbooks and advanced literature on group theory by focusing on more advanced mathematical techniques and the two main areas of applications:

- The use of group theoretical techniques to exploit known symmetries, as in the study of extra-nuclear atomic and molecular phenomena; and
- The discovery of underlying symmetries, as in nuclear structure and elementary particle theory.

The current volume contains chapters on unitary groups, "accidental" degeneracy, dynamical groups in atomic and molecular physics, computer methods in group theory, and Galilei groups. Each chapter has been written by a specialist whose aim is to bring the newcomers to the field up to the frontiers of research, while introducing the expert to new research developments. The stress on similar basic techniques (e.g., the Wigner-Eckart theorem) and uniform notation makes it easy for the specialist to explore areas outside his specialty.

This book will be of great use to theoretical, mathematical, high energy, solid state, and chemical physicists, as well as chemists working in related areas.

1971, 328 pp., $18.50 **AP2884**

Anelastic Relaxation in Crystalline Solids

By A. S. NOWICK
Henry Krumb School of Mines
Columbia University
New York, New York

B. S. BERRY
Thomas J. Watson Research Center
IBM Corporation
Yorktown Heights, New York

CONTENTS:

Characterization of Anelastic Behavior. Relations among the Response Functions: The Boltzmann Superposition Principle. Mechanical Models and Discrete Spectra. Continuous Spectra. Internal Variables and the Thermodynamic Basis for Relaxation Spectra. Anisotropic Elasticity and Anelasticity. Point Defects and Atom Movements. Theory of Point-Defect Relaxations. The Snoek Relaxation. The Zener Relaxation. Other Point-Defect Relaxations. Dislocations and Crystal Boundaries. Dislocation Relaxations. Further Dislocation Effects. Boundary Relaxation Processes and Internal Friction at High Temperatures. Relaxations Associated with Phase Transformations. Thermoelastic Relaxation and the Interaction of Acoustic Waves with Lattice Vibrations. Magnetoelastic Relaxations and Hysteresis Damping of Ferromagnetic Materials. Electronic Relaxation and Related Phenomena. Experimental Methods. Appendices.
